Company Overview

Established 2007 in Belize, Go Green Ltd. works with companies around the world to provide Central America and the Caribbean with renewable energy such as solar, wind and bioenergy. From start to finish, we design, supervise, and teach local companies to maintain such systems. The company has installed On and Off Grid Solar Systems in Belize, Barbados and Dominica.

The company acquires the most efficient and up to date equipment from European companies.

We offer on- and off-grid systems and hybrid systems (combination of different energy sources, like wind turbines, diesel generator, photo voltaic systems).

We provide energy efficiency audits for commercial and residential customers with detailed reports and recommendations for EE and RE solutions. We provide an evaluation of all your energy consuming equipment, energy layout and energy use on site with a detailed report to reduce your energy cost. This report includes an ROI for the investment of energy friendly equipment.

We teach seminars for fundamentals of photovoltaic systems, grid-interactive systems and off-grid systems in theory and practice.

We offer also a Bioenergy Seminar covering biogas, liquid biofuels and solid biofuels in theory and practice.

Background and Development

We aim to create a more sustainable energy environment for local communities, reduce the carbon footprint and attract investment through industry and commerce. Our view is that a great deal of work has been done politically in many countries to promote renewable energy through incentives, and more and more programs will be implemented.

Code of Practice – Business Philosophy

We specialize in customer specific design, consulting, supervision and maintenance to meet your needs in any way possible by respecting environmental requirements.

To achieve these goals, we perform an energy efficiency audit or a requirement analysis before we design your specific system. We acquire the most efficient and highest quality equipment from European companies. Our technicians are highly qualified.

Transforming our energy supply requires our total commitment to grow renewable energy. We see ourselves as part of a global network shaping this change.
